

PHOTOGRAPHER

• TOOLBOX •

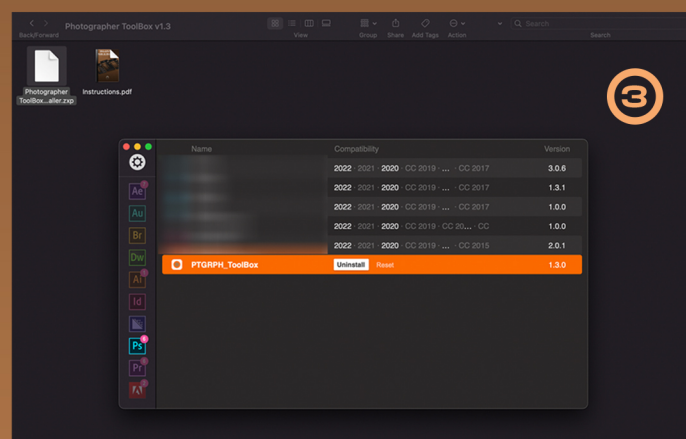

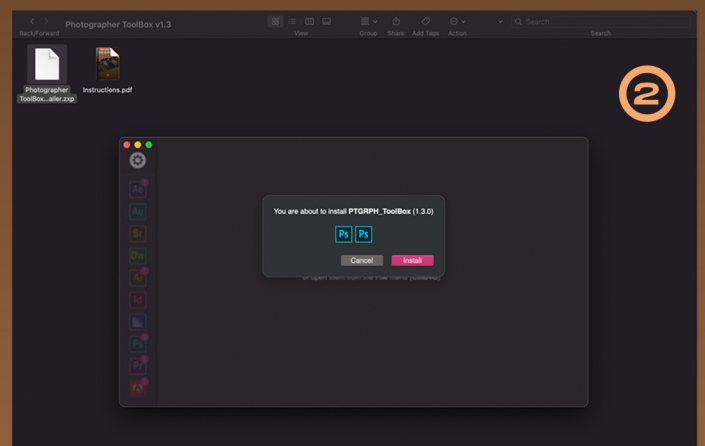

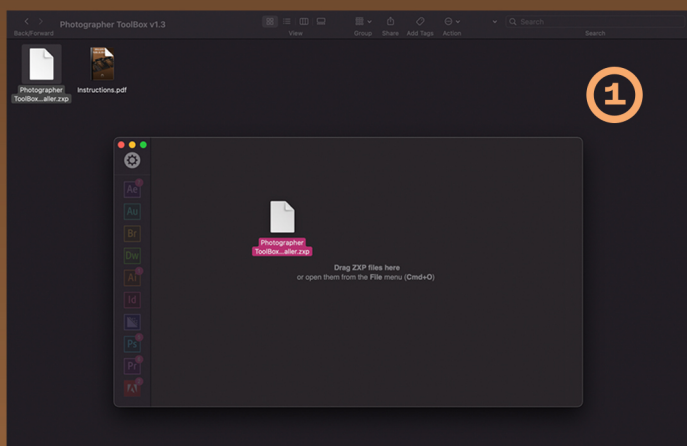

1. Installation

Installation Requirements:

To install the plugin you need to download & install the [ZXP Installer](#) (a free third party app agreed from Adobe to install Photoshop Plugins).

Installation Process:

01. Quite your Photoshop if it was open.
02. Open the ZXP Installer App.
03. Drag & Drop Photographer ToolBox Installer.zxp file inside the app.
04. Confirm your Photoshop Version, & Lunch your Photoshop.
05. Inside Photoshop, Go to: *Window >> Extensions >> Photographer ToolBox*.

2. Panel overview

Here's an overview of the panel with all functions, please read it first to understand how the plugin works. if you have any question feel free to contact us.

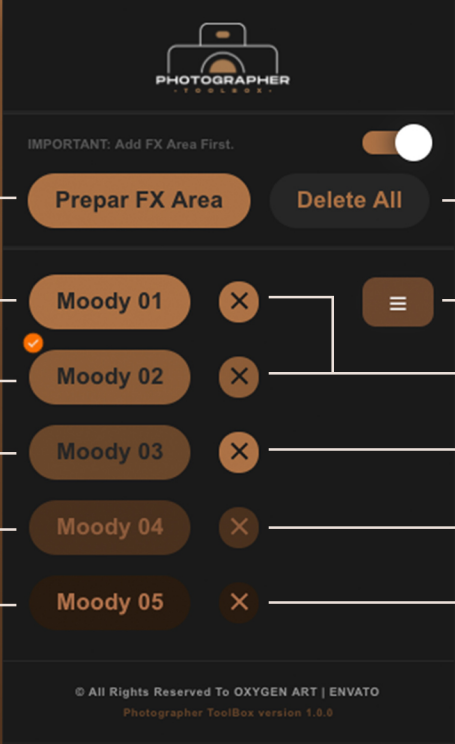

Create a new FX area, it's import, without it you can't create any FX. play it for 01 time per image.

All buttons to apply FX, every fx has the name of the style and the fx number.

With this button you can delete all fx in 01 time. but the FX area created will not deleted.

Menu icon, inside it you can find all the styles (See overview below).

You can delete the FX created from this icon, every FX has its own delete button.

Photographer ToolBox version 1.0.0

in case you want to reload the panel, just click on the logo to refrash all.

You can see this check icon on the FX button corner applied, if you delete the FX from the button main remove button, this icon will be invisible. this will help you to see which style you applied and this button will not hide if you delete All FX once.

With this switch toggle you can active if you want the panel to save the session of your editing. " this option will take more space from your Hard Drive".

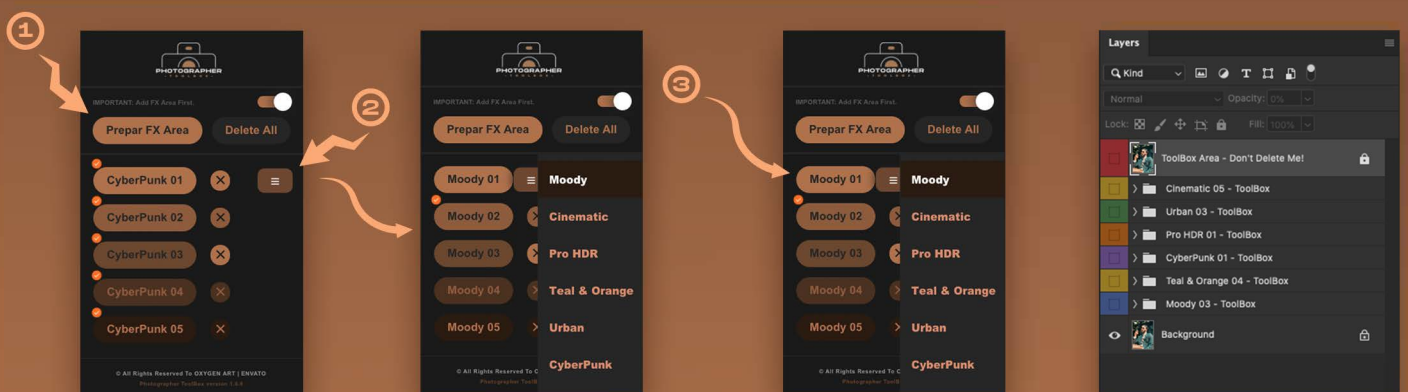

If you click on the menu icon, you'll see this side-bar menu contains all the 06 styles, choose 01 and the FXs buttons will change the names with the style name.

3. Use The Plugin

- Open your image and make sure it's in a locked background, if not take it from; Layer >> New >> Layer From Background.
- Make sure your photoshop version has Camera Raw Filter, to check that: Filter >> Camera Raw Filter. if you don't have it, download it from [here](#).
- Create a new FX area for 01 time per image (nothing will work without it), then from the corner menu choose your favorite style, and you'll see the button will change with its name and the number of FX.
- Click on any FX button and wait a few seconds until the processing finish.
- OK now the Fx is added to Layers Panel, but it's hidden, you just need to enable it.
- Every will add with its name and in an organized group folder with a unique color, also too see the FX applied, just see the orange check icon in the corner of the FX button.
- To Delete any FX just click on the remove icon next to the main FX button, and the check icon will disappear and the effect will be deleted from the Layers.
- You can add multiple FX in the same image, but don't apply the same effect 2 times, this is why we add the orange check icon, so check before if the FX is already added.
- To delete all FXs in one time, just click on the button (Delete All), but the check icon will not hide, you need to click on the remove icon to make it invisible.
